Professional Summary

Technical Engineer with 3+ years in POS, CCTV, network and store IT support for retail and restaurant brands. In July 2026, IT management offered me a move to the Digital Solutions team after seeing my fit for the work and my eagerness to learn. There I find work people still do by hand and replace it with simple digital tools. I build those tools with AI: it helps me write the code, and I handle the design, testing, rollout and documentation. I also handle security on my team, from the security of our sales sync agent to approved awareness drills for staff. Most of my projects started as problems I saw first-hand in stores.

Skills

Core: Process Improvement, Workflow Automation, AI-Assisted Development, SQL Reporting, System Monitoring, Security Reviews, POS Technical Support, IT Operations Support, Incident and Ticket Handling, CCTV/NVR Troubleshooting, Network Troubleshooting, Technical Documentation

AI and Automation: Claude Code, OpenAI, Gemini, Make.com, Webhooks, Telegram Bots, Google Sheets Automation

Programming (AI-assisted): Python, PyQt6, SQL, T-SQL, SQL Server, Azure SQL, MySQL, SQLite, PHP, PowerShell, Git, GitHub

Security: Security Reviews, Findings Logs, Security Awareness Training, OWASP Top 10 (learning), Password Hashing, Signed Updates, HTTPS, Role-Based Access Control

Tools: SQL Server Management Studio, VS Code, PyInstaller, Microsoft Office, Ticketing Systems, Remote Access Tools

Store IT: POS Troubleshooting, POS Upgrades, Printers and Peripherals, New Store IT Setup, VPN, CCTV and NVR

Work Experience

Technical Engineer, Digital Solutions Team

Table Group, Inc. | Philippines | July 2026 - Present

- Find manual processes across the company and replace them with digital tools.
- Collaborator on the POS sales sync agent running in 31 stores. Since its original developer left, I maintain it, handle its security (a review found 11 new issues, 2 critical) and monitor it so it stays online.
- Wrote the sync agent's store troubleshooting guide and about 30 SQL sales reports and data checks.
- Built a VPN watchdog, now in all 31 stores, that reconnects the store VPN and keeps the sync agent running without help from store staff.
- Built the Swirl Points Tool, used daily by tech engineers to check and format loyalty reports for 262 stores.
- Building Pulse Grid, a store monitoring platform for CCTV recorders, POS health, printers and internet, with regular updates to the director.
- Running an approved security awareness drill for staff, and preparing an offline file converter for the company's monthly general assembly.

Technical Engineer, Store IT Support

Table Group, Inc. | Philippines | September 2024 - June 2026

- Provided onsite and remote IT support for Nono's, The Coffee Bean and Tea Leaf, Dempsey and The Kitchen by Coffee Bean.
- Troubleshot POS, workstation, printer, network, software and peripheral issues to keep stores running.
- Supported POS upgrades, preventive maintenance and IT setup for new and existing stores.
- Coordinated with store teams, vendors and internal teams to document incidents and follow them through to resolution.
- Built a Telegram and AI expense logger so field engineers could record travel and meal costs on the day.

IT Staff / Technical Support Engineer

GOLDENABC, Inc. | Philippines | May 2022 - April 2023

- Delivered remote and onsite POS support for retail stores across Luzon, including Penshoppe, Oxygn, Regatta, Forme, Memo and Bocu.
- Troubleshot POS hardware, software, printer, network and user access issues by phone, email, remote tools and onsite visits.
- Handled tickets, incident updates, service requests and escalations while working to SLA targets.
- Assisted with POS refresh and upgrade projects, including store coordination, system checks, deployment and user training.
- Provided IT office support, including software compliance checks and equipment inventory.

Projects

POS Sales Sync Agent | Company project, in use in 31 stores
Desktop agent that copies each store's POS sales to one Azure SQL database. I maintain it, handle its security and monitor it. Python, Azure SQL, SQLite, T-SQL.

VPN Watchdog | My idea, in use in 31 stores
Background app that reconnects the store VPN after repeated failed checks and keeps exactly one sync agent running. Python, pywinauto, PowerShell.

Swirl Points Tool | My idea, used by tech engineers
Checks every line of a loyalty report for card, amount and duplicate receipts, flags doubtful lines for approval, and exports a clean Excel file. Python, PyQt6.

Pulse Grid | My idea, in progress
One dashboard for every store's CCTV recorders, POS health, printers and internet, with separate access for admins and store managers. PHP, MySQL, Python.

Offline File Converter | My idea, being pitched
Converts Word, Excel, PowerPoint, PDF and image files on the computer itself, so company files never go to online converter sites. Python, PyQt6, LibreOffice.

Security Awareness Drill | Approved, in progress
Harmless links, QR codes and files that show staff a short lesson and sign them up for a security seminar. No data is collected.

Travel Expense Logger | Tested with coworkers
Telegram bot that reads receipts with AI and fills the reimbursement sheet the same day. Make.com, OpenAI, Google Sheets.

Education

BS Information Technology | Bestlink College of the Philippines | Graduated 2021

Certifications

Computer Systems Servicing Training | TESDA

Leadership

Vice President | Homeowners' Youth Organization | 2019 - 2020
